BEARINGS FOR YOUR FUTURE

Keramiklager / Hybridkugellager
Solid Ceramic Bearings / Hybrid Bearings

BEARINGS FOR YOUR FUTURE

Zen Ball Bearings are manufactured to the highest quality for standard and non-standard applications. Our technical department can modify any non-standard bearings to your specific requirements, regardless of quantity.

Apart from our extensive miniature ball bearing range of more than 1000 different types, ranging from 1-10 mm bore (Including inch dimensions), our range also includes Thin section, Three part thrust, Popular metric and any kind of non standard bearing. We are able to design bearings according to your requirements using new materials like ceramic or special steels for applications in Industry, Medicine, Chemistry and Food Processing.

Our technical department can modify any non-standard bearings to your specific requirements, even for small quantities.

For any items not listed in our catalogue, please contact our experienced sales team.

Zen Ball Bearings Shanghai has been awarded the German ISO TUV Rheinland certification for inspection of ZEN products.

This certification is the highest standard a business in our industry can achieve. It is internationally recognised as a guarantee of quality, customer focus and continual improvement.

Specifications

General Details

Material	Components		Details	Application
	Rings	Balls		
Ball Bearing Chrome Steel 100 Cr6 (Nr. 1.3505)	X	X	Hard wearing Good shock and corrosive resistance	Standard
Stainless Steel AISI 440 C (Nr. 1.4125) [†]	X	X	Very good corrosive resistance	Food industry, pharmaceutical industry, ship building and other corrosive surroundings
AISI304	X	X	Very good corrosive resistance	Corrosive surroundings
AISI316	X	X	Excellent corrosive resistance	Corrosive surroundings
AISI 316L	X	X	Excellent corrosive resistance	Corrosive surroundings
Si3N4	X	X	High temperature Insulation Excellent corrosive resistance	Chemistry, electronic, food, marine, medical
ZrO2	X	X	High temperature Insulation Excellent corrosive resistance	Chemistry, electronic, food, marine, medical
Al2O3		X	High temperature Insulation Excellent corrosive resistance	Chemistry, electronic, food, marine, medical

[†]The static and dynamic load rating of AISI 440 C - ball bearings is approximately 75-80% of the 100 Cr6 - ball bearings.

Technical Details

Material	Hardness	Max. Temp.	C	Si	Mn	P	S	Cr	Mo	Ni
100 Cr6 (Nr. 1.3505)	60-64HRC	max. 150°C	0,5~1,10	0,15~0,35	≤0,5	≤0,025	≤0,025	1,3~1,6	≤0,08

Liability claims regarding damage caused by the use of any information provided, including any kind of information which is incomplete or incorrect, will therefore be rejected.

Cages

	Reference	Cage type	Remarks
	FC	Full Complement / No Cage	Low revolution high load rating
	W	Crown Cage	Light weight, smooth, low friction
	J	Ribbon Cage	Standard cage, good durability
	T9H	Glass Fibre Reinforced Cage	Light weight, strong, high speed
		Phenolic Cage	Light weight, strong, high speed
	M	Brass Cage	Low friction, good durability
	PEEK	PEEK	High temperature Good durability Corrosion resistant Insulated
	PTFE	PTFE	High temperature Good durability Corrosion resistant Insulated

Lubrication

Lubricant	Remarks	Advantages/Applications
No lubricant	Only with stainless steel bearings or with the use of corrosion preventive fluid	When the lubrication is provided by the customer
Grease	Standard filling 30-40%	Life-time lubrication is possible Good protection against corrosion According to the application a variety of greases can be used
Oil		Low friction High revolution

Ceramic Balls

Material:

Silicon Nitride (Si3N4), Zirconia (ZrO2) and Alumina (Al2O3)

Specification:

1/64" ~ 3/2" with different gauge

Precision:

G3 ~ G20

Usage:

For bearings, inspection and other rolling conditions.

Advantages of ceramic balls compared to steel:

1. Lighter than steel
2. Larger elastic modulus
3. Lower friction coefficient, rolls more freely
4. Lower coefficient of thermal expansion
5. Superior surface finish
6. Higher high temperature hardness
7. Rust proof, rolls without oil or grease
8. Corrosion resistant than steel

Grey Silicon Nitride Balls

Zirconia Balls

Alumina Balls

Ceramic Bearings

Bearing class

ZEN Ball Bearings can produce both complete ceramic ball bearings and hybrid stainless steel or chrome steel ball bearings.

Complete ceramic bearing = The inner ring, outer ring and balls are composed of ceramic materials, including zirconia and silicon nitride.

Hybrid bearings = The balls are ceramic, while the outer ring and inner ring are chrome/stainless steel. Hybrid ball bearings, normally have the identical structure as steel bearings.

Properties advantages, compared with steel ball bearing

- 1. Higher limiting speeds:** Ceramic is lighter than steel and can effectively restrain the centrifugal force, therefore enhances the limiting speeds.
- 2. Higher precision usage:** Ceramic has a higher hardness and elastic modulus than steel, which means ceramic bearings are more rigid than steel bearings, so therefore can be used in higher precision conditions.
- 3. Longer life:** Lighter ceramic leads to a lower centrifugal force, this will extend the life of the bearing. Furthermore, friction coefficient of ceramic is lower than steel, which also extends the life of the bearing.
- 4. Higher temperature usage:** Ceramic is more mechanically stable at elevated temperatures, therefore they could be used under higher temperatures.
- 5. Temperature-variation usage:** Ceramic has a lower thermal expansion coefficient, the clearance and the tolerance variation is lower than those of steel bearings, which leads to a greater variation in temperature range.
- 6. Better seizure resistance:** Ceramic has a smaller thermal expansion coefficient; indicating less thermal deformation, therefore enhancing seizure resistance.
- 7. Could run without oil or grease:** Ceramic never rusts and is self-lubricated, therefore can be used in applications that require no oil or grease.
- 8. Resistant to acid, alkali and salt:** The chemical industry is the largest potential application industry of ceramic bearings to be exploited.
- 9. More suitable for magnetic applications:** Our ceramic bearings are non-magnetic, which means it is difficult for magnetic particles to adhere on the race, therefore reducing particle-abrasion.

Ceramic Bearings

Bearing class

ZEN Ball Bearings can produce full ceramic bearing and hybrid ball bearing.

Full ceramic bearing = The inner ring, out ring and ball is composed of ceramic materials, including zirconia and silicon nitride.

Hybrid bearing = The ball is ceramic, while the out ring and inner ring are steel. Hybrid ball bearing, normally have the identical structure as steel bearing.

Cages used in Ceramic bearings

- Beside the standard steel cages, TPE and PEEK cages are used for full ceramic or hybrid ball bearings.
- Both cages types are temperature resistant up to 260 C.
- The Peek material is a harder material and its advantage is high temperature resistance, good mechanical properties, self-lubricating, and anti-chemical properties. The advantage of PTFE is low friction, high temperature, and good wearability.

Facts

Full ceramic bearings have only a load rating (including hybrid ceramic bearing) of about 60% of chrome steel bearing.

Usage

For rough service environment, such as chemical, metallurgy, food, electric, medical industry etc. Our bearing products have been used as high-speed motor spindle bearing, high precision machine spindle bearing, dental drill bearing, high speed wheel head bearing, instrument bearing, hard drive bearing, skating bearing, fishing bearing, etc.

Item	Unit	Steel	Si3N4	ZrO ₂	Al ₂ O ₃
